

HUMAN MOBILITY AND CLEAN ENERGY - A SNAPSHOT

Affordable and **CLEAN ENERGY** is deeply relevant to the **capacity and motivation** of people to move

LACK OF ACCESS to affordable and clean energy can be a **driver to move**

Drivers of migration and displacement are the **byproduct** of individual, family and community decisions

These may be influenced by existing **governance structures**, the availability of **basic services** and utilities or the perception of **OPPORTUNITIES**

IOM and partners work to **EMPOWER** diaspora groups, migrants and displaced persons, returning migrants and others to support the transfer of **skills, know-how, technology** and **investments**

That can **BOOST LOCAL, sustainable development practices**

- » Energy consumption
- » Clean energy development
- » Renewable energy production

Progress towards **SDG 7** is also to be achieved by ensuring **environmentally sustainable practices** are deployed both in the humanitarian and development settings during **different migration phases**

So that **migrants and displaced populations** are **NOT LEFT BEHIND** and fulfil their **development potential**
